

Intent Map Template

Author: Lakshmi Sagar S P

Data Safety Disclaimer

This template is fully abstracted and designed for methodological demonstration only.

- No real customer data
- No identifiers
- No internal thresholds
- No proprietary systems

*Its purpose is to capture **thinking and structure**, not sensitive information.*

Case Metadata (Abstracted)

- **Case Type / Context:**
 - **Review Trigger:** (alert / complaint / manual review)
 - **Analysis Period:**
 - **Overall Risk Assessment:** Low / Medium / High
-

Behavioural Flags Used

*List only the **most relevant behavioural flags** observed in this case.*

- **Flag 1:**

- **Flag 2:**
- **Flag 3:**
- **Flag 4:** (if applicable)

Guidelines

- *Limit to 2–5 flags*
- *Prefer strong behavioural indicators over weak anomalies*
- *Avoid flags that do not influence intent*

Intent Map (Phase-wise)

<i>Phase</i>	<i>Time Window</i>	<i>Dominant Behavioural Flags</i>	<i>Behaviour Summary</i>	<i>Inferred Intent</i>	<i>Risk Assessment</i>	<i>Likely Next Action</i>
<i>Phase 1</i>						
<i>Phase 2</i>						
<i>Phase 3</i>						
<i>Phase 4 (if needed)</i>						
<i>Phase 5 (if needed)</i>						

Phase Design Rules

- *Aim for 3–6 phases*
 - *Merge short or noisy activity into the nearest stable phase*
 - *Split phases only when behaviour **meaningfully changes***
 - *Each phase should represent a **clear behavioural state***
-

Narrative Summary

Summarise the account behaviour in **plain language**:

- What changed from normal to suspicious?
- Was the behaviour **structured or random**?
- Did the activity show **testing** → **execution** → **evasion** patterns?
- Does it align with known fraud or misuse typologies?

(Keep this concise: ~5–7 lines)

Detection Opportunity

Answer the following questions:

- Which **combination of behavioural flags** could have detected this earlier?
 - Was the risk visible **before execution**, or only after?
 - Did existing rules fail due to:
 - Missing sequencing?
 - Rigid thresholds?
 - Lack of intent awareness?
-

Rule / Hypothesis Output

Detection Hypothesis

If an account shows **[Behaviour A]** followed by **[Behaviour B]** within a relative time window, it may indicate **[inferred intent]**.

Rule Definition (Abstracted)

- **Objective:**
 - **Applicable Behaviour / Persona:**
 - **Core Logic (flag combinations):**
 - **Expected Detection Behaviour:**
 - **False Positive Risk: Low / Medium / High**
-
